1. Introduction

"World of Flavors" is more than just a recipe-sharing website; it's a comprehensive, intelligent system that revolutionizes how we discover and experience recipes. The project offers an innovative solution to one of the biggest challenges facing cooking enthusiasts: "What should I cook today with the ingredients I have?"

This is where the idea for the smart recipe finder comes in. It's the key feature that distinguishes our project and makes it unique – an advanced, intelligent system that changes how users interact with food content. Instead of traditional keyword searches, our system provides a smart solution that reflects the practical realities of the kitchen.

This feature allows users to input the ingredients they have, and then the system searches for recipes that match those ingredients and displays them to the user.

"World of Flavors" is more than just a website – it's a smart assistant in your kitchen, a friend that understands what you have and suggests what you can prepare, and a platform that brings food lovers together in a creative, interactive digital space.

2. Technologies Used for Implementation

Layer	Technology
Frontend	HTML5, CSS3, JavaScript
Backend	PHP
Database	MySQL
Web Server	XAMPP (Apache & MySQL)
Library	Bootstrap 5

These technologies work together to provide a responsive interface and reliable backend functionality.

3. Project Setup

This section explains how to install, configure, and run the project on a local or hosted server.

3.1 Requirements

- PHP 7.0 or higher
- MySQL
- Apache server (XAMPP)
- A web browser

3.2 Installation Steps

1- Download or extract the project files

Extract all files of The World of Flavors into your server directory:

- htdocs/ for XAMPP

2- Create the database

- Open phpMyAdmin (open your browser and go to http://localhost/phpmyadmin)
- Create a database named: ***cooking_project***

3- Import the SQL file

- Import the file: ***cooking_project.sql***

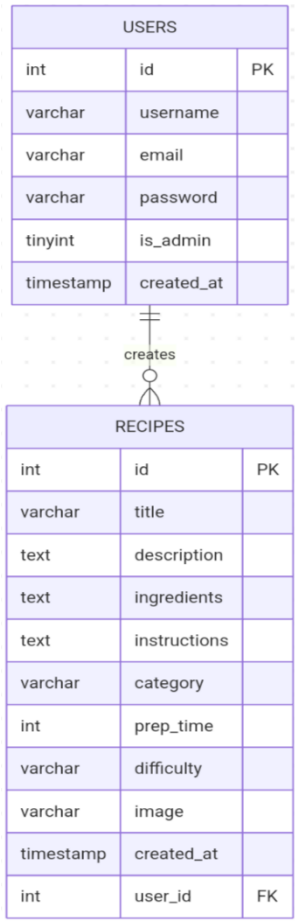

4- Run the project

- Open your browser and visit: (http://localhost/ The-world-of-flavors/index.php)

4. Database Schema

The project uses a MySQL database named cooking_project, containing two main tables: "users" and "recipes".

4.1 ERD Overview

4.2 Tables Description

- **users**

Column	Type	Description
id	INT(PK)	Unique user ID
username	VARCHAR	User's name
email	VARCHAR	User's email (Unique)
password	VARCHAR	Hashed password
is_admin	TINYINT	1=admin, 0=user
Created_at	TIMESTAMP	Registration date

- **recipes**

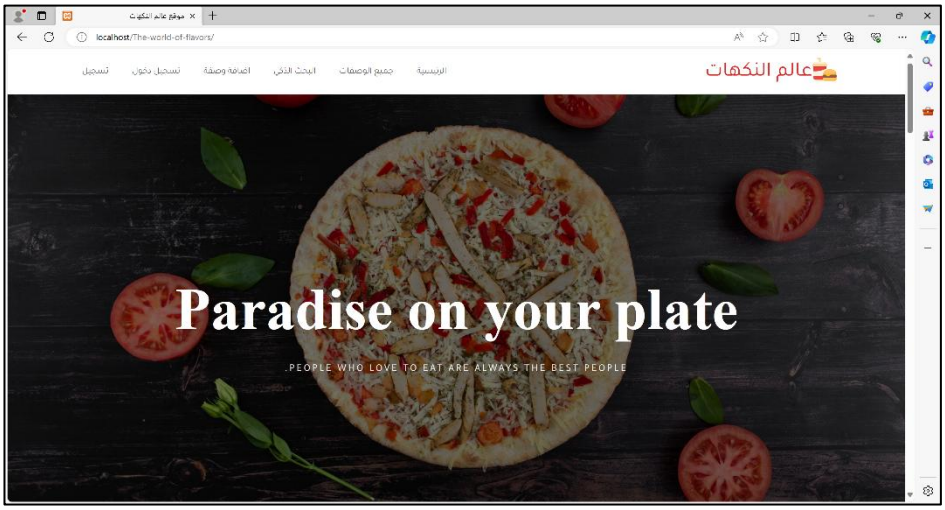

Column	Type	Description
id	INT(PK)	Unique recipe ID
title	VARCHAR	Recipe title
description	TEXT	Short summary
ingredients	TEXT	List of ingredients
instructions	TEXT	Steps to prepare the dish
category	VARCHAR	Type/category of the recipe
prep_time	INT	Preparation time in minutes
difficulty	VARCHAR	Easy / Medium / Hard
image	VARCHAR	Image filename stored in uploads/
created_at	TIMESTAMP	Date of recipe creation
user_id	INT(FK)	ID of the user who created the recipe

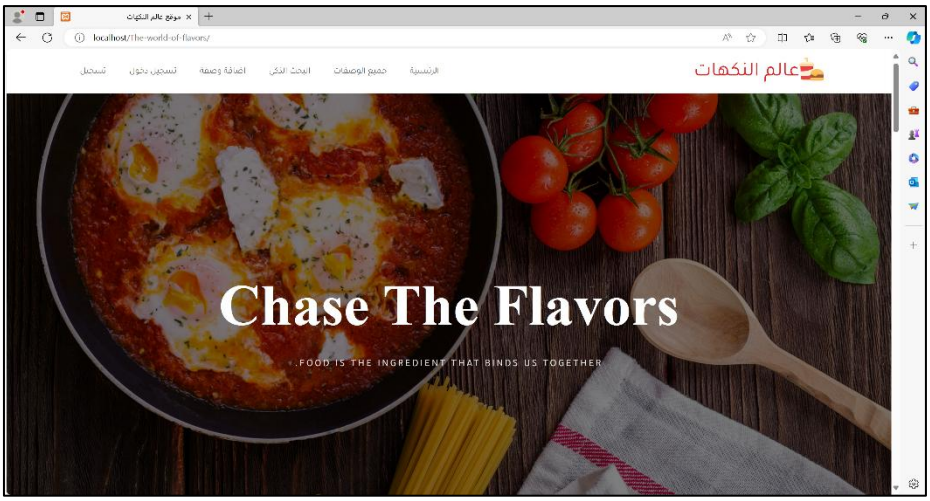

5. Usage Instructions

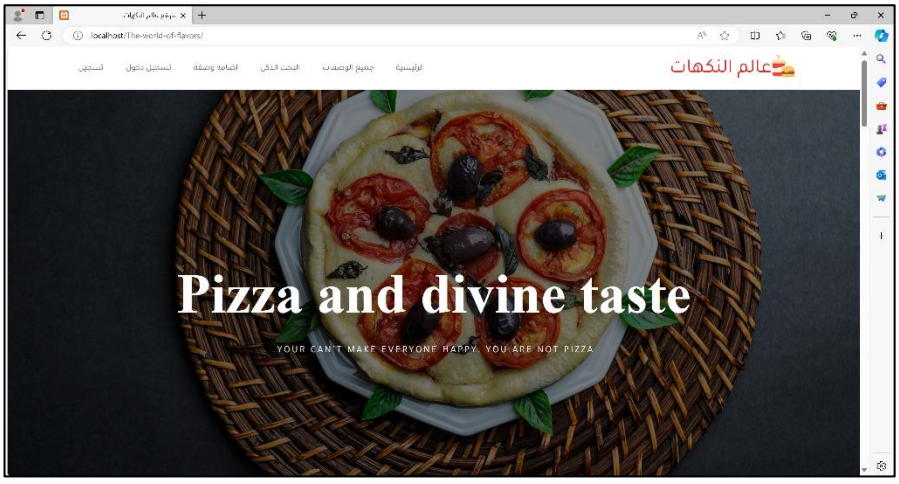

This section explains how to use the project as a regular user and as an administrator.

5.1 Using the Website

- **Home Page (index)**
  At the beginning of the page, three famous quotes about food are displayed one after the other

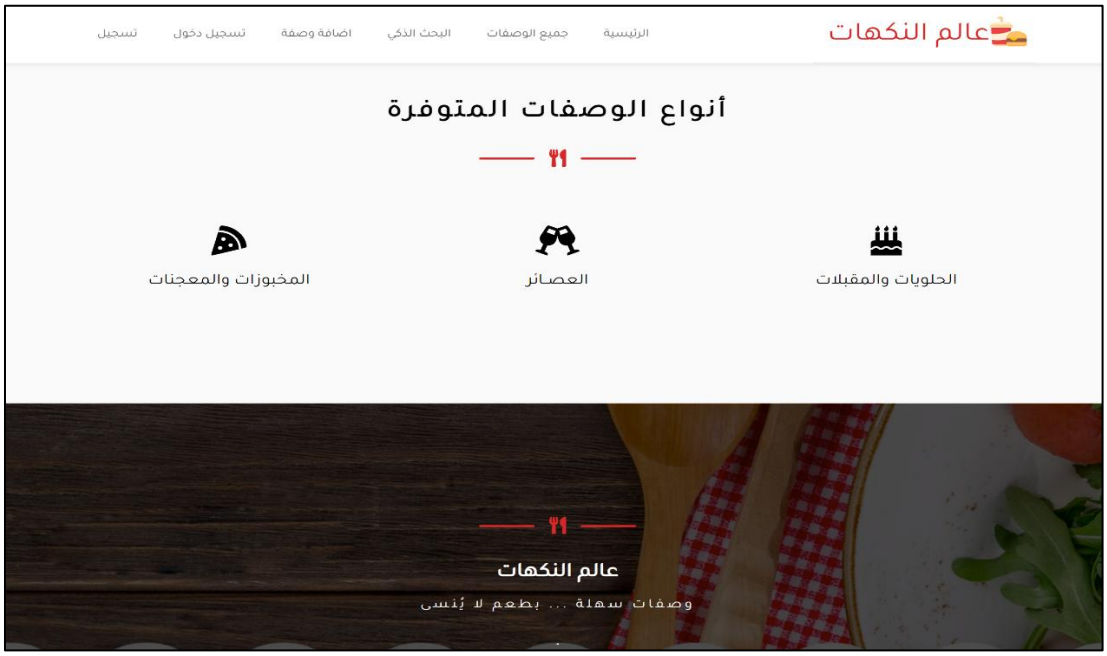

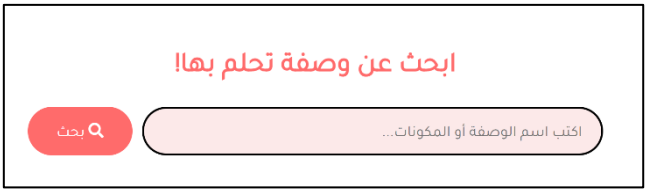

Following that is a short description of the site and the types of recipes available on the site.

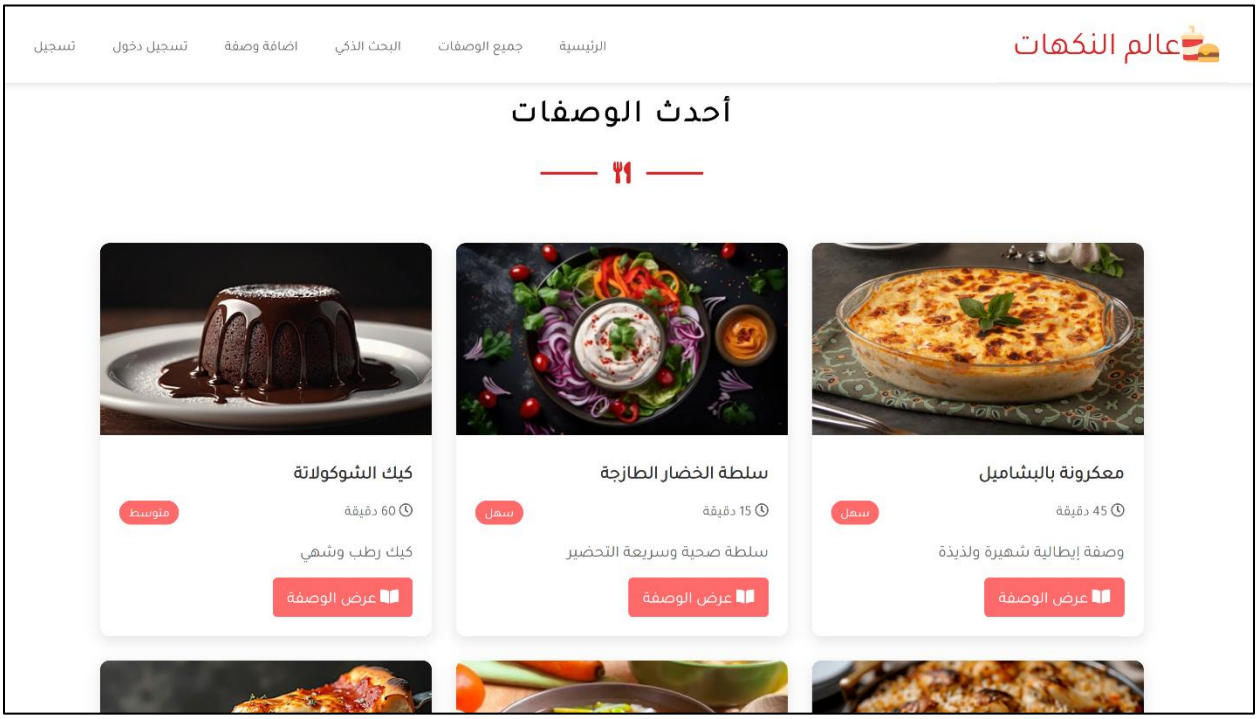

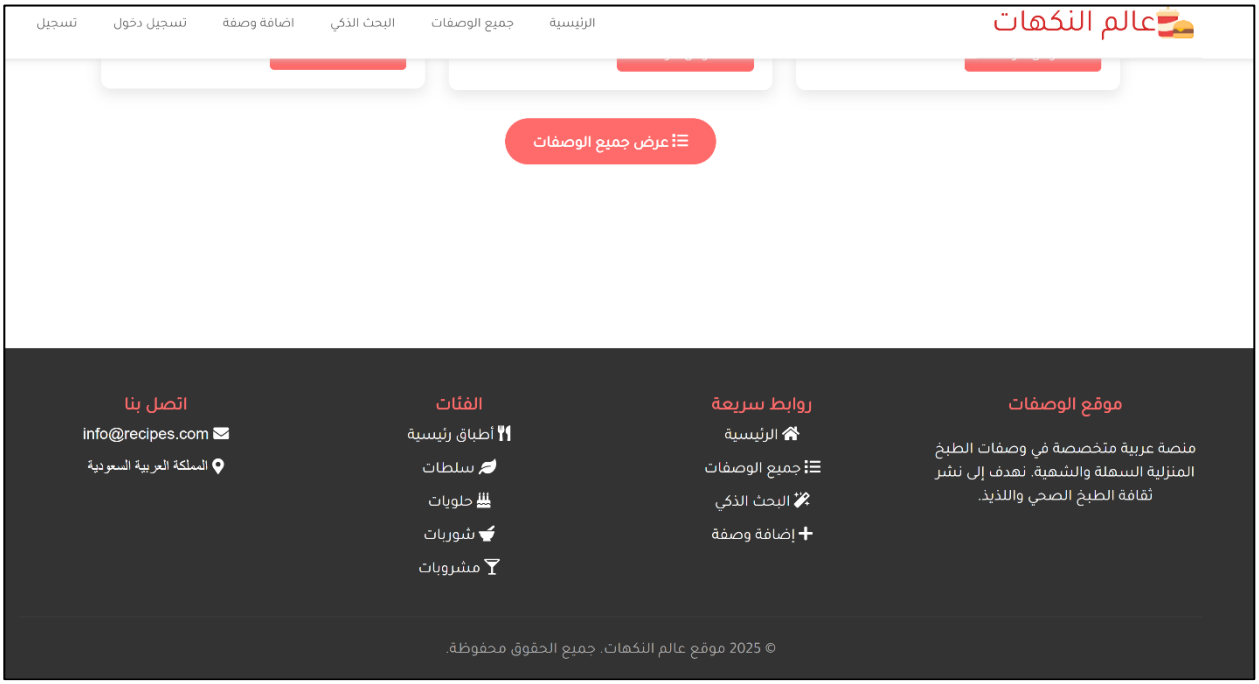

Next, there is a box to search for recipes by recipe name or specific ingredient (where when the user searches for a specific recipe, he is taken to the recipe-builder page).

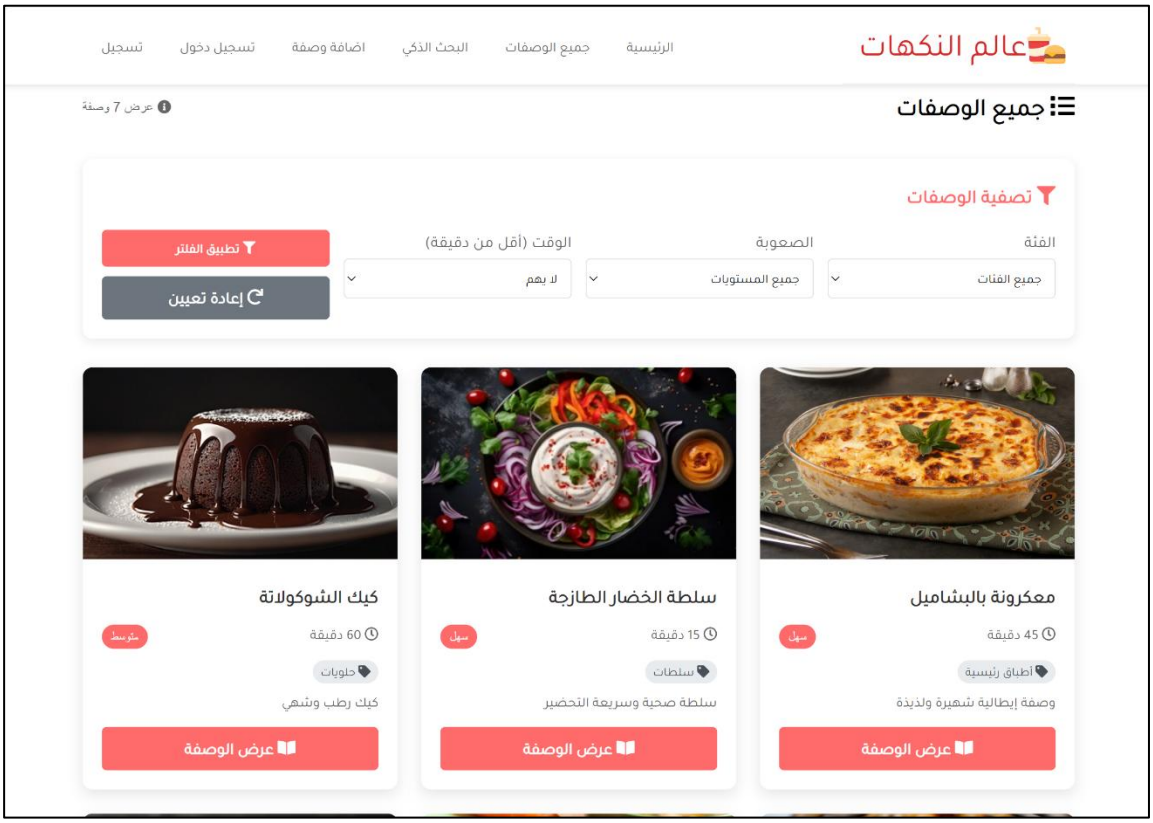

Next, the 6 most recently added recipes to the site are displayed.

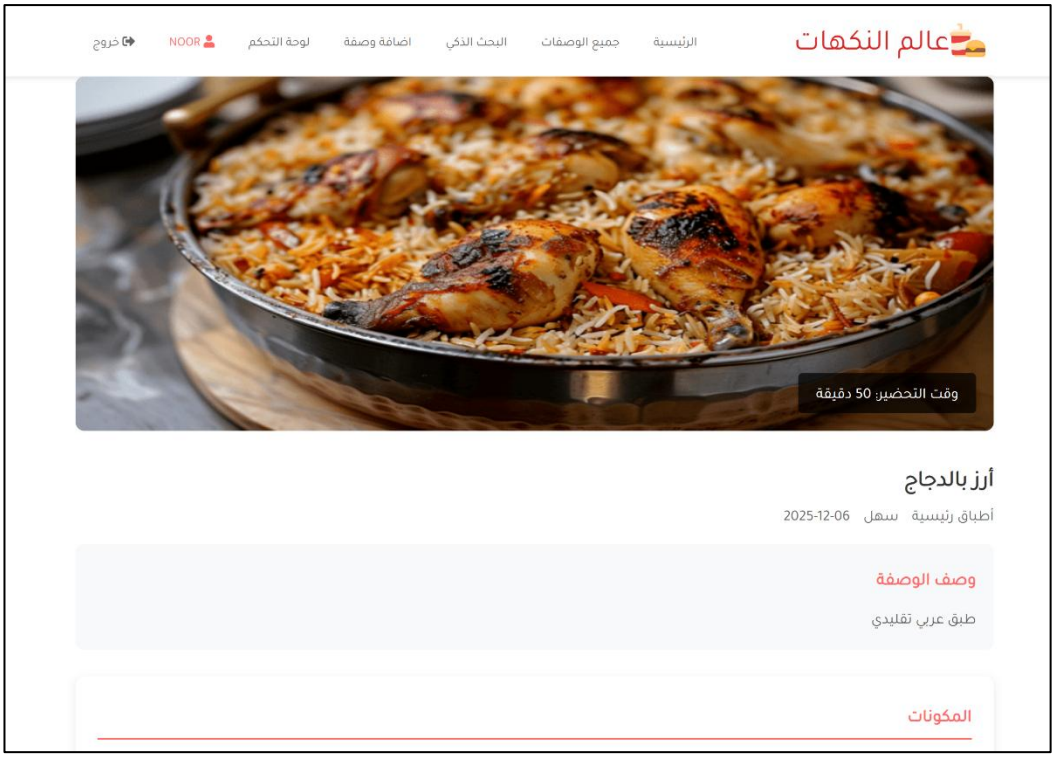

At the bottom of the page, there is a button to go to the recipes page to see all the available recipes. Finally, the footer is displayed.

- **Recipes page**
  This page displays all recipes, with the user able to filter them.

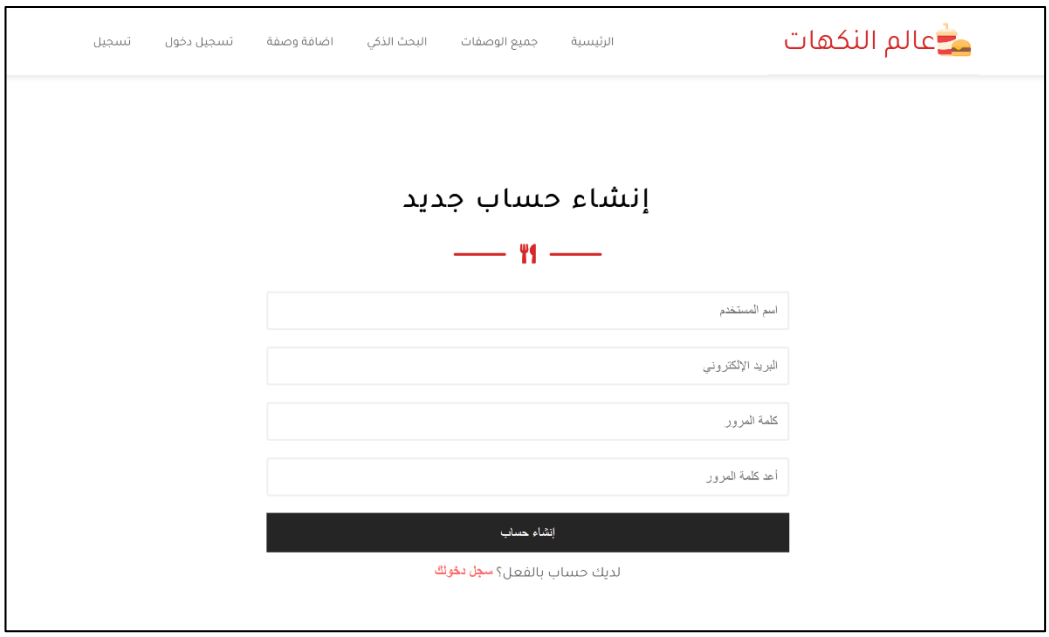

- **Recipe Detail**
  Displays the full recipe: title, ingredients, steps, and image

5.2 User Action

- **Register page**
  Users can create an account using a username, email, and password

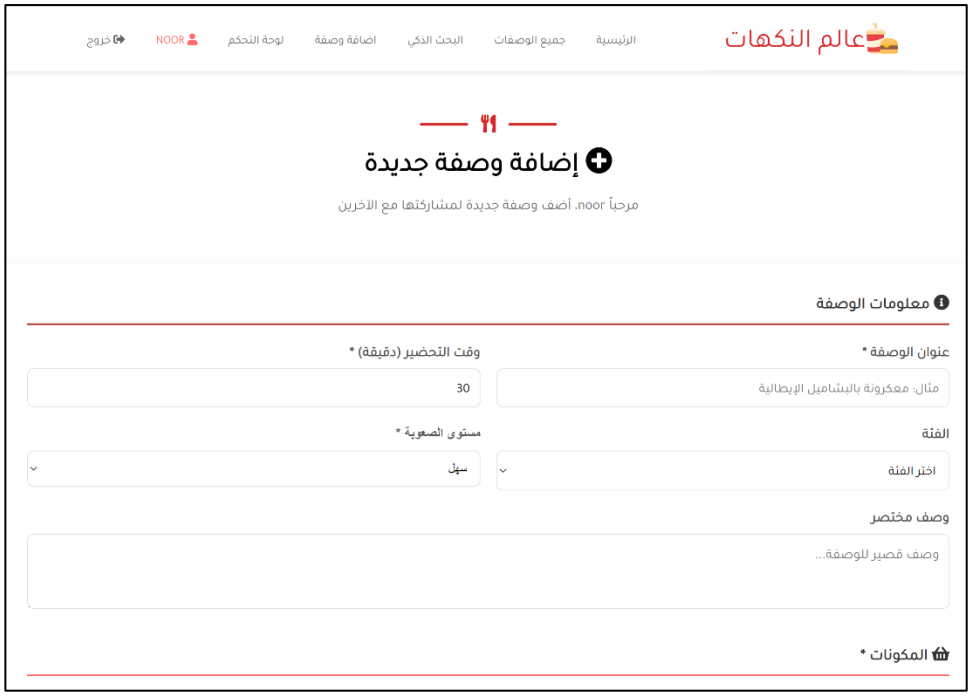

- **Login page**
  Users log in using their credentials
  Passwords are validated securely

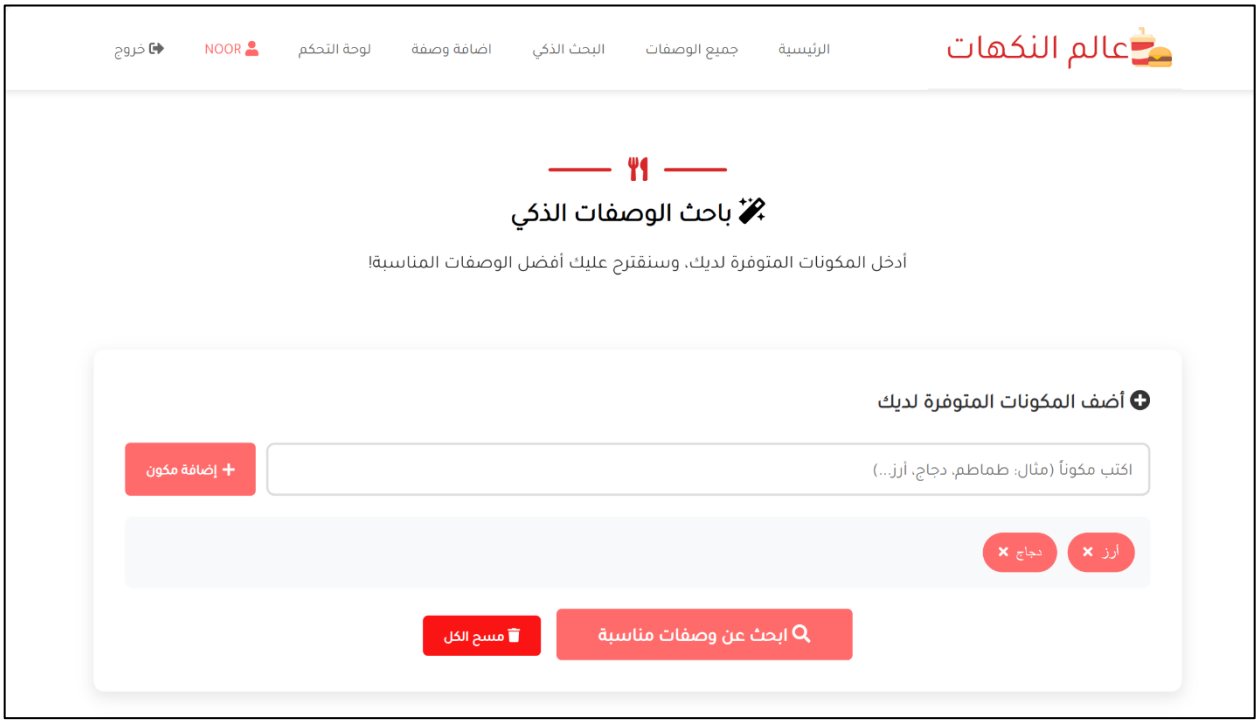

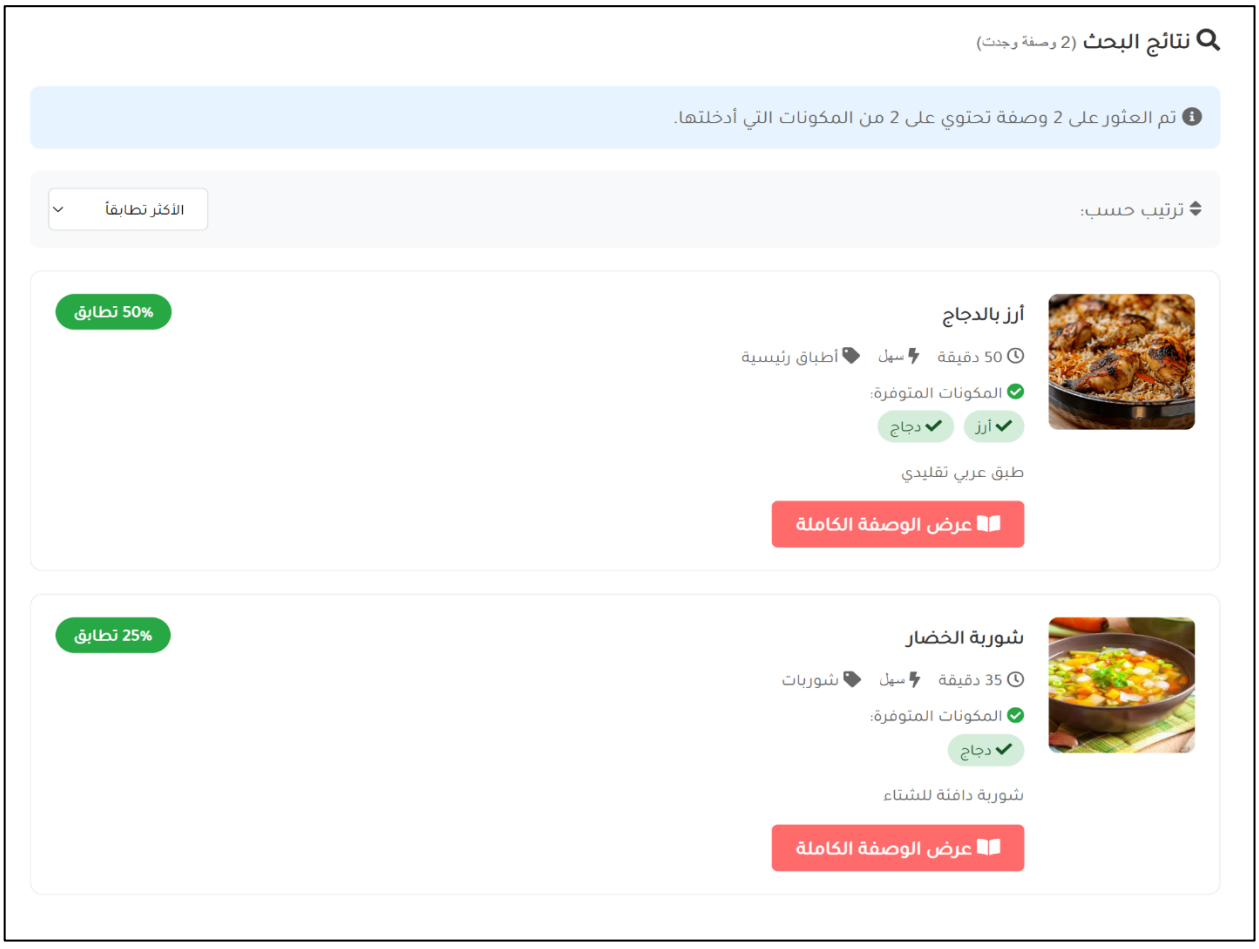

After the user logs in to the site, the user will be allowed to add a recipe and use the smart search engine.

- **Add Recipe**
  Fill in the title, description, ingredients, steps, category, difficulty, and upload an image

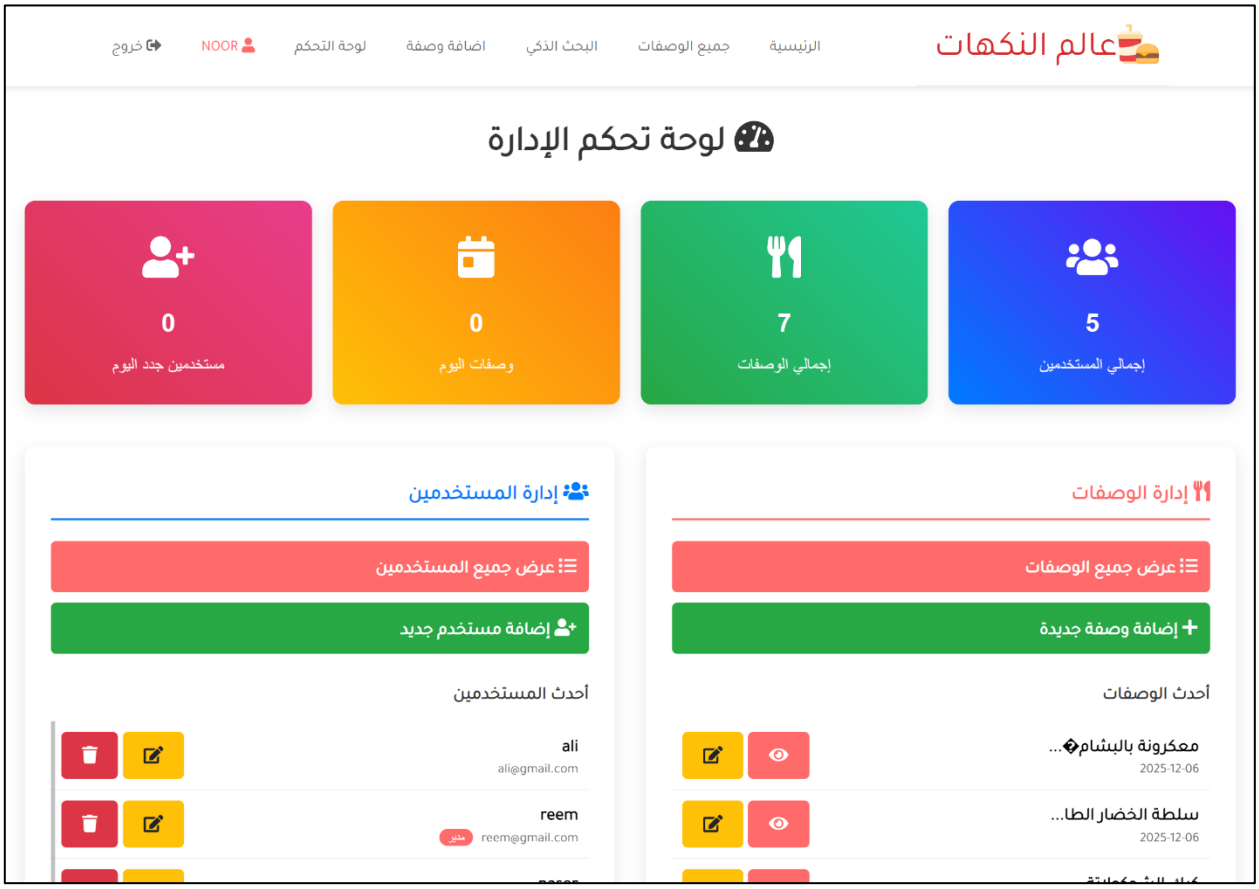

- **Recipe-builder**
  The user enters the ingredients they have, and then recipes that match the user's ingredients are retrieved

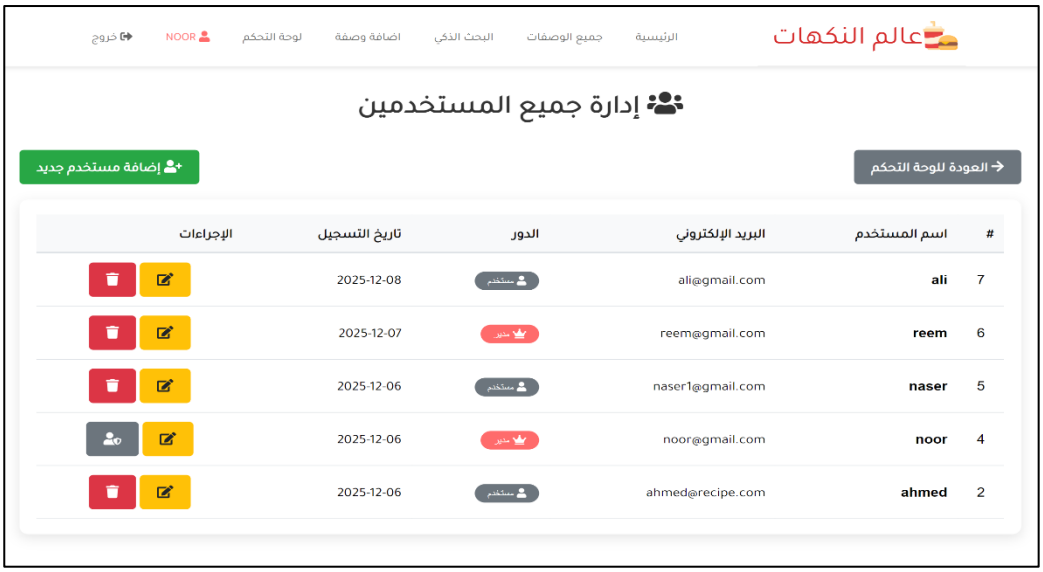

5.3 Admin Panel (Admin Only)

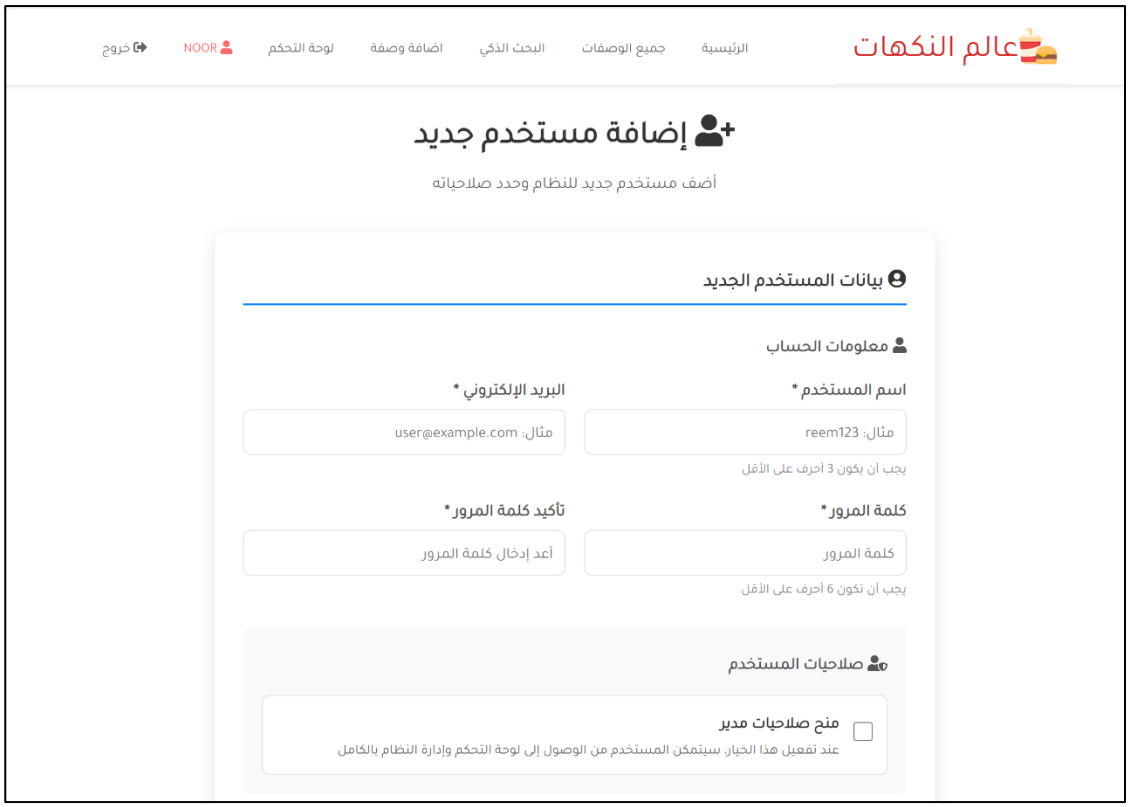

- **Dashboard page**
  Admin features include:
  Viewing statistics (new users, new recipes), Managing all users, Managing all recipes

- **Manage-users page**
  View all data of registered users on the site and be able to modify or delete data.

- **Add-user page**
  View Create a new user or administrator account

- **Edit-user page**

- **manage-recipes page**
  View all data of recipes on the site and be able to modify or delete data.
